

IN THE CLAIMS:

Please add new claims 36-39.

1-21. (Canceled).

22. (Previously Presented) A bubble solution container, comprising:

a container body having an inner chamber, a bottom wall, a top wall, an opening provided in the top wall, and a tube extending from the opening into the inner chamber to provide communication between the inner chamber and the exterior of the container body, the container body including bubble solution therein;

a lid pivotably coupled to the top wall and covering the opening; and

a wand positioned inside the tube, the wand having a shaft having a first end and a second end, with a serrated bubble ring provided at the first end and a support section provided at the second end, wherein a lining is provided around a portion of the support section and is received inside the tube.

23. (Previously Presented) The container of claim 22, wherein the container body includes:

a lower body that receives liquid therein and having the bottom wall and an open upper mouth; and

an upper body having the top wall and an open lower mouth, the upper body being removably connected to the lower body with the open mouths thereof in communication with each other to form the inner chamber.

24. (Canceled).

25. (Previously Presented) The container of claim 23, further including a hood connected to the top wall and cooperating with the lid to completely cover the opening.

26. (Previously Presented) The container of claim 25, wherein the lid is pivoted over the hood.

27. (Previously Presented) The container of claim 23, wherein the lid pivots between a closed position with the lid covering the opening, and an opened position with the opening exposed.

28. (Previously Presented) The container of claim 22, wherein the opening has a configuration selected from the group comprising: oval, circular and elliptical.

29. (Previously Presented) The container of claim 22, wherein each of the shaft and the tube has a curved cross-section.

30. (Canceled).

31. (Previously Presented) The container of claim 34, wherein the container body includes:

a lower body that receives liquid therein and having the bottom wall and an open upper mouth; and

an upper body having the top wall and an open lower mouth, the upper body being removably connected to the lower body with the open mouths thereof in communication with each other to form the inner chamber.

32. (Canceled).

33. (Previously Presented) The container of claim 34, wherein each of the shaft and the first and second tubes has a curved cross-section.

34. (Previously Presented) A bubble solution container, comprising:

a container body having an inner chamber, a bottom wall, a top wall, a first opening provided in the top wall, a first tube extending from the first opening into the inner chamber to provide communication between the inner chamber and the exterior of the container body, a second opening provided in the top wall, a second tube extending from the second opening into the inner chamber to provide communication between the inner chamber and the exterior of the container body, with the container body including bubble solution therein; and

a first wand positioned inside the first tube, and a second wand positioned inside the second tube, with each wand having a shaft having a first end and a second end, with a serrated ring provided at the first end.

35. (Previously Presented) A bubble solution container, comprising:

a container body having an inner chamber, a bottom wall, a top wall, a plurality of openings provided in the top wall and a plurality of tubes, with each tube extending from a separate one of the plurality of openings into the inner chamber to provide communication between the inner chamber and the exterior of the container body, with the container body including bubble solution therein; and

a plurality of wands, with each wand positioned inside a separate one of the plurality of tubes, with each wand having a shaft having a first end and a second end, and with a serrated ring provided at the first end.

36. (New) The container of claim 34, wherein each tube has the same length.

37. (New) The container of claim 34, wherein each tube is offset from the center of the inner chamber.

38. (New) The container of claim 35, wherein each tube has the same length.

39. (New) The container of claim 35, wherein each tube is offset from the center of the inner chamber.
